Project Design Phase

Import Data using Transform Maps (Spreadsheet)

• Create the Employee Test custom table (u_employee_test).

• Design the Employee Test form with Employee ID, Employee Name, Email, Department, and Location.

• Create Employee Import as the staging table.

• Create the Sample Spreadsheet Import Transform Map with Employee Import as source and Employee Test as target.

• Map source fields to target fields using Auto Map Matching Fields and Mapping Assist.

• Design Coalesce behavior to update existing employee records instead of creating duplicates.

• Design three reports and one Employee Analytics Dashboard.
