Project Development Phase

Import Data using Transform Maps (Spreadsheet)

• Prepare the spreadsheet with sample employee data.

• Create Employee Test and add the required employee fields.

• Use Load Data to create the Employee Import staging table.

• Create Sample Spreadsheet Import and configure its source and target tables.

• Map the fields and execute the Transform.

• Verify that records are created in Employee Test.

• Enable Coalesce and import additional Excel data.

• Run the transform again and verify inserted and updated records.

• Create Employees by Department as a Pie chart with Count aggregation.

• Create Employees by Location as a Bar chart with Count aggregation.

• Create Employee List Report with the five employee fields.

• Create Employee Analytics Dashboard and add all three reports.
